Printed and on-screen colors are approximate. Make final selections from a physical finish sample. LRV values are approximate.

Color & Finish Selection

How to choose, sample and order Ultra-Guard finishes

STANDARD COLORS

The 40 colors on page 1 are Ultra-Guard standard colors. Each finish is factory-tinted, so the color runs through the full thickness of the finish coat instead of sitting on the surface like paint.

CUSTOM COLOR MATCHING

Need a color not shown? We can tint the finish to match any manufacturer's EIFS color card, a paint chip or an existing wall. On retrofits and repairs we match the color and texture of the surrounding walls, so the Ultra-Guard areas blend in with the rest of the building.

FINISH TEXTURES

Texture	Appearance	Typical Use
Ultra Smooth	Smooth, fine-grain sand float	Contemporary facades, trim and bands
Ultra Sand	Uniform sand texture. Our standard finish.	General wall areas, residential and commercial
Ultra Coarse	Heavier aggregate with more shadow	Large wall areas. Hides minor surface variation.
Ultra Swirl	Circular trowel pattern	Traditional stucco look, matching older EIFS
Ultra Freeform	Hand-troweled, varied pattern	Custom or Old-World appearance

Ultra Smooth

Ultra Sand

Ultra Swirl

Ultra Freeform

LIGHT REFLECTANCE VALUE (LRV)

LRV measures how much light a color reflects, from 0 (black) to 100 (pure white). Dark colors absorb more heat. On EIFS, high surface temperatures can stress the insulation board and finish.

- Colors marked **LRV < 20** on page 1 need review before use on large or sun-exposed wall areas. They are best suited to accents, trim and shaded elevations.
- Follow the finish manufacturer's minimum LRV requirements for the project.
- LRV values shown are approximate and calculated from the printed color. The finish manufacturer publishes the official values.

SELECTING YOUR COLOR

- **Ask for a physical sample.** Printers and screens do not reproduce EIFS colors accurately. We provide finish samples in the texture you choose.
- **View samples outdoors** on the building, in morning and afternoon light. Colors look lighter on a large wall than on a small chip.
- **Texture affects color.** Coarse textures cast more shadow and look slightly darker than fine textures in the same color.
- **Batch consistency:** order enough material for each elevation from a single batch, and finish wall areas break to break (at corners, joints or reveals) to avoid visible lap lines.

ORDERING

Give us the **color code** (for example UG-202 Sandbridge) and the **texture** on your quote or project agreement. Quotes from photos are free. On-site quotes start at $150; inspections in Hampton Roads from $450.
