MODERN WALL SYSTEMS • HAMPTON ROADS, VA

Stop Woodpecker Holes. For Good.

ULTRA-GUARD EIFS
INSULATED STUCCO SYSTEMS

Ultra-Guard EIFS™ is a woodpecker-resistant insulated stucco system. It looks like your existing EIFS, but birds can't drill through it.

THE PROBLEM

Standard EIFS is a thin finish over soft foam. To a woodpecker it sounds hollow and drills easily, so birds dig in after insects or to build nests. Every hole lets water in behind the wall, and patching just rebuilds the same soft surface they hit last year.

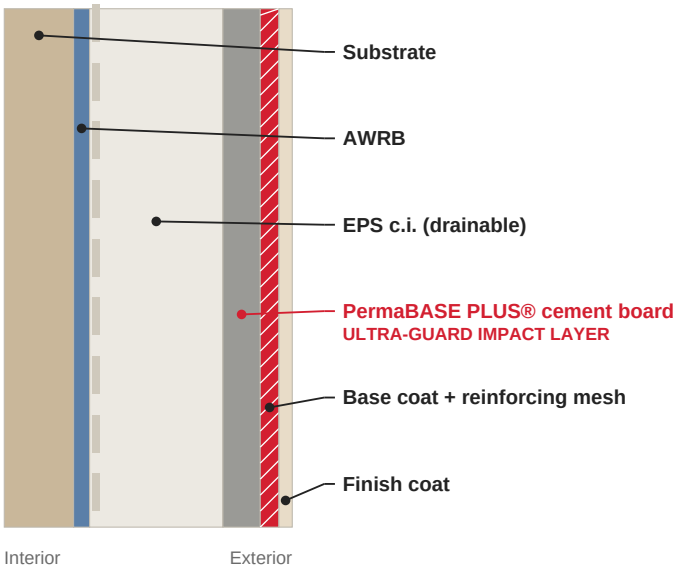

THE ULTRA-GUARD FIX

Ultra-Guard adds a rigid **cement board impact layer** over the insulation, under the reinforced base coat and finish. A peck hits a hard surface instead of foam. You keep the insulation, drainage and stucco look.

WHY OWNERS CHOOSE IT

- Stops the repair-every-spring cycle
- Matches your existing color and texture
- No netting, decoys or spikes on the building
- Wet or rotted sheathing is fixed before we install
- Retrofit over existing EIFS or new construction
- EIFS specialists since 1991

TYPICAL ULTRA-GUARD WALL SECTION

WHERE WE SEE THE MOST DAMAGE

- Chimney chases and gable ends
- Upper-story walls and corners
- Homes near woods, water or open land
- Buildings already hit before

FREE **Virtual Estimate**

Send photos of the damage and a wide shot of each wall. We send back a written estimate at no cost.

$450 **Site Inspections From**

On-site inspection, Southside Hampton Roads: damage, moisture and substrate checked, with a written scope.

HOW IT WORKS

01 **Send photos**
Email photos or book a site visit.

02 **Get your scope**
Written estimate and scope of work.

03 **Wall protected**
Repairs, install and color match.
